

AARYAN BASNET

Robotics & AI Student (BSc) · University of Klagenfurt

Feldkirchen in Kärnten, Austria | +43 660 5573141 | basnetaryan123@gmail.com

github.com/Aaryanbasnet100 | linkedin.com/in/aryan-basnet-7a290a202

PROFILE

Robotics & AI student at the University of Klagenfurt with hands-on data-analysis and machine-learning experience, including a data-analyst internship. Comfortable collecting and processing data, running and comparing experiments, and turning results into clear reports, supported by a solid mathematics and physics foundation. Reliable, independent and team-oriented. Keen to apply structured, data-driven problem-solving to single-process development in furnace technology at Infineon.

EDUCATION

BSc Robotics & Artificial Intelligence — University of Klagenfurt (AAU)

Mar 2025 – expected 2028

Klagenfurt, Austria

Higher Secondary Education (Science) — Herald International College

2020 – 2023

Nepal · Secondary school leaving qualification

TECHNICAL & ANALYTICAL SKILLS

- **Programming:** Python, Java, SQL.
- **Data analysis & reporting:** Pandas, NumPy, scikit-learn, Excel (advanced), Power BI; data cleaning, experimental design, evaluation and visualisation.
- **Machine learning:** TensorFlow, PyTorch, OpenCV; deep learning (CNN, LSTM), time-series analysis.
- **Tools & methods:** Docker, Git, GitHub Actions, Streamlit, PostgreSQL; data pipelines, automation, thorough documentation.

EXPERIENCE

Crew Member (part-time) — McDonald's · Feldkirchen in Kärnten

05/2025 – 06/2025

- Worked in a fast-paced, German-speaking team, serving customers and coordinating with colleagues in German; demonstrated reliability and the ability to follow precise procedures under pressure.

Data Analyst Intern — 360VUZ · Dubai

06/2024 – 01/2025

- Collected, cleaned and processed datasets in Python (Pandas, NumPy) to support data-driven decisions.
- Analysed data to identify trends and prepared reports and dashboards in Excel and Power BI within a collaborative team.

Junior Accountant — Vaga · Dubai

11/2023 – 05/2024

- Maintained financial records and processed daily transactions with high accuracy; automated repetitive reporting using advanced Excel and basic Python.

SELECTED PROJECTS

Weather Forecasting — LSTM vs CNN

- Designed comparative time-series experiments on the Jena Climate dataset using sliding-window sequencing; evaluated and documented why LSTM best captured temporal dependencies.

Real-Time Emotion Detection (CNN)

- Trained a CNN on the FER-2013 dataset for facial-emotion classification; integrated OpenCV for live video and built a Streamlit interface for real-time predictions.

Sentinel — Self-Healing Web Scraper

- Built a containerised (Docker) scraping and data-pipeline system with PostgreSQL and fallback parsing logic; automated execution via GitHub Actions with Pandas reporting.

ShiftFlow — Shift-Scheduling App · Flutter / Firebase

- Developed a multi-tenant shift-scheduling app with Flutter (cross-platform UI) and Firebase (authentication and cloud database), managing staff schedules across multiple organisations.

LANGUAGES

English — fluent **German** — B1 (actively improving toward B2) **Nepali** — native
